

# AutoDeploy Superpowers with CICD

# CICD Workflow

# Continuous Integration

- A development practice of merging developers' working copies to a shared repository several times a day.

## Advantages:

- Automated unit, integrated and acceptance tests
- Automated test coverages and code static analysis
- Automated builds

# Continuous Delivery

- An engineering practice in which teams produce and release production ready deployments in short cycles.

## Advantages:

- Automated infrastructure provisioning.
- Automated clean-up of infrastructure.
- Faster and more frequent of deployments.
- Automated smoke tests, consequently doing away with manual checks.
- Reduces deployment risks enabling quicker user feedback.
